

Subtraction Problems

Quick Overview

- Subtraction: $-$. Subtraction, like addition, is a way of combining numbers to get another number.
 - Example: $6 - 2 = 4$. Another example: $47 - 28 = 19$.
- Negative numbers: roughly put, negative numbers result from subtracting bigger numbers from smaller numbers.
 - Example: $2 - 6 = -4$. Another example: $13 - 61 = -48$.

Practice Problems

1. What is $3 - 1$?
2. What is $9 - 0$?
3. What is $7 - 7$?
4. What is $4 - 3$?
5. What is $5 - 8$?
6. What is $6 - 3$?
7. What is $12 - 4$?
8. What is $17 - 9$?
9. What is $32 - 20$?
10. What is $1 - 15$?
11. What is $22 - 34$?
12. What is $18 - 6$?
13. What is $29 - 5$?
14. What is $13 - 40$?
15. What is $21 - 15$?
16. What is $19 - 21$?
17. What is $63 - 35$?
18. What is $27 - 0$?
19. What is $82 - 13$?
20. What is $200 - 100$?
21. What is $370 - 250$?
22. What is $581 - 39$?
23. What is $292 - 111$?
24. What is $1987 - 13$?
25. What is $64 - 9334$?
26. What is $999 - 888$?
27. What is $121 - 254$?
28. What is $4196 - 1892$?
29. What is $72543 - 22093$?
30. What is $48573 - 27714$?
